

Dear Hiring Team,

I am currently pursuing a Master's degree in Computer Science at Leibniz Universität Hannover and would like to apply for the Working Student position within your development team.

I have close to three years of professional experience as a Software Engineer, where I worked on enterprise integrations, backend systems, and full-stack applications in agile environments. During this time, I gained practical experience with Java, Spring Boot, REST APIs, Angular, and enterprise workflow applications while collaborating with cross-functional teams and supporting business-critical systems.

What particularly interests me about this role is the opportunity to contribute to both development and operational support while continuing to expand my knowledge in workflow systems and cloud technologies such as AWS. Through my previous experience, I have developed a strong ability to quickly understand complex systems, troubleshoot issues, and work in structured and collaborative environments. I also enjoy learning new technologies and adapting to new challenges.

In addition, I have experience supporting production systems, resolving incidents, and contributing to technical documentation and knowledge-sharing processes using tools such as Jira, ServiceNow, and internal knowledge bases. I believe my analytical mindset, technical foundation, and willingness to learn would allow me to contribute effectively to your team.

I am fluent in English and am currently learning German to better integrate into the local professional environment. I would welcome the opportunity to further discuss my motivation and qualifications in an interview.

Thank you for your time and consideration.

Kind regards,
Rony Souz
